

Amendments to the Drawings

Proposed FIGS. 3, 6 and 7 are attached to this paper.

Applicant proposes corrections to FIGS. 6 and 7 to address the noted informalities

In particular, applicant proposes to renumber "decision step" element 630 at the bottom of FIG. 6 as element 636. Further, applicant proposes to redirect indicator lines from numbers 633, 634 and 635 toward the "the decision step" elements on the left in FIG. 6. This renumbering and redirection is consistent with Examiner's suggestions and with the amendments to the specification described in the preceding section.

With respect to FIG. 7, applicant proposes replacing the labels Datapump Gateway® by the term "Data Port".

Applicant also proposes corrections to FIGS. 3 and 6 to show elements of claims 7 and 14, respectively, as shown in the drawing sheets attached to this paper.

In FIG. 3, applicant proposes to add an element 351, corresponding to the element of claim 7, which is described in the amended specification as follows: "computer 370 may include a processor or means 351 for detecting a satellite identified position of the personal medical alert device or other such device using, for example, network wireless transmission 361 which includes satellite communications."

In FIG. 6, applicant proposes to add a decision step element 650, corresponding to the elements of claim 14, which are described in the amended specification as follows: "At step 650, computer 370 monitors the security of the sealed data port (e.g., physical seal and/or network interface firewalls) for any breaches and accordingly controls the flow of data through the data port, for example, for all of the concurrent or subsequent steps shown in FIG. 6."
